Task Title:

Assignment 3

Task description:

To make a to-do app using HTML CSS and Java script.

Steps Taken:

Usage of HTML and CSS to make the page and used java script for making the page responsive.

Challenges Faced:

This time this was a challenging task. It was very time consuming. Making it according to the idea needed much effort.

Solutions Implemented:

First used HTML and CSS to make the form page. Then usage of java script to make it fully functional. As it required more efforts took some help from the net.

Learnings:

This task was filled with lot of learning. In this, I have my first step towards learning how the apps that we use are actually made. In this I have also explored many features of java script and css.

Project Update:

Hereby I can say that the project is complete.
